

CardCity

COMP127, Emily Keller

After prototyping...

- Initial math & code
- Reworking & refactoring
- Translating to an interactive medium
- Gameplay testing

Initial math & code

$$\text{if } (x > \frac{\text{boardSize}}{2}) \{$$

$$\text{removeLeft}(\frac{\text{boardSize}}{2} - x)$$

$$\}$$

$$\text{else if } (x < \frac{\text{boardSize}}{2}) \{$$

$$\text{removeRight}(\frac{\text{boardSize}}{2} - x)$$

$$\}$$

$$\text{else...}$$

```
if (x > boardSize/2) removeLeftRows(x - (boardSize/2));  
else if (x < boardSize/2) removeRightRows((boardSize/2) - x);  
if (y > boardSize/2) removeTopRows(y - (boardSize/2));  
else if (y < boardSize/2) removeBottomRows((boardSize/2) - y);
```

The simplest solution is not always the right one; consider your scope.

Testing

- Faster calculations -> more games -> more data
- Issues in gameplay and code
